ENVS 663. Climate and Environmental Change

3 Units

Description: Global and regional climate change is one of the most pressing issues of our time. The science of climate change has employed a great diversity of techniques to unravel the Earth's climate history on multiple time scales. There now exists a considerable body of knowledge as to the magnitudes and rates of climate and environmental change. However, while the physical basis of the global climate system and its variation are well resolved, there is debate as to the nature of human intervention in the global climate system and consequences of climate change on the natural and human-made environment. As time moves forward, issues connected to all facets of climate change will become increasingly important particularly in terms of human occupancy and the sustainability of the planet. What is currently missing from debates connected to climate change is an agreed upon understanding the linkages between the physical basis of the global climate system and its connection to human affairs.

The readings and in-class exercises have been selected to introduce you to the scope of qualitative methodological approaches used in geography and provide a sampling of references and resources that will help you work through your own research process. In examining how we generate and interpret data from the field-the social, environmental and political space where we learn about the world-we will critique and apply a variety of qualitative methods. In the process, you will have a chance to explore these methods in the context of your own planned or ongoing work and interest. We will focus on a wide range of methods but pay close attention to: conducting interviews, constructing questionnaires, participant observation and discourse analysis.

Genres that were heavily influenced by Disco, such as electropop, synth-pop and House, will be studied, with a particular emphasis on the role of dance clubs within marginalized communities, and in particular House and Club Culture in Chicago. The music industry's co-opting of dance music styles and culture and the erasure of its cultural origins in order to meet the demands of the mainstream American music market will also be critically assessed. How the democratization of music creation through the development of new music media and how these technologies enabled the creation of the musical genres under study will be addressed throughout the semester. This course will also provide a musical and cultural exploration of various subgenres of EDM and House, such as Acid House, Detroit House and Crunk.

- PAS 227. Survey of American Diversity - SB, D1** 3 Units
Term Typically Offered: Fall, Spring, Summer
Description: A social map of the contemporary United States reveals several culturally-identified human groups based upon race, ethnicity, religion, language, family origins, and other characteristics. While diversity has become integral to the American society, it is an area that is little-studied and far less understood by many. This course will help students better understand racial and ethnic diversity in today's society. More than a historical overview, this course includes selected readings and film which provide glimpses behind the facade of the "other", to see some of the struggles they face as they become part of the American "fabric". In the process of developing this understanding, we will constantly challenge ourselves by asking two main questions: "Who is an American?" and "What does it mean to become an American?" - PAS 247. Language, Protest and Identity** 3 Units
Term Typically Offered: Fall, Spring
Description: Sociolinguists see language as more than a question of people talking to each other. Language not only communicates ideas, but also communicates our identities in a society. It identifies us as we see ourselves and it identifies us, as others perceive us. Embodied in the act of human communication is a complex set of rules for how to send a message and another set of rules for how to interpret that message. Beyond these rules, socially constructed preconceptions, such as issues of race, class, and gender, can have an influence on the way people choose to communicate with others and on how that communication is understood by others. Much of this operates subtly and below our consciousness, such as when we say one thing, but our kinesics (body language) displays a different attitude. However, there are some, particularly those working in politics or advertising, who have developed a keen ability to manipulate or otherwise channel messages for a special effect. PHEP 200. Disease Detectives - SB **3 Units**

Term Typically Offered: Fall, Spring

Description: Life expectancy has increased from about 47 to 87 years from the start of the 20th century. This increase was produced primarily by controlling infectious diseases with vaccines, antibiotics, and improved sanitation and nutrition. However, these measures would not have been successful without changes in social policies, economics, and behaviors. This course examines the history of advances in population health, highlighting influential people and cultures and illustrating how they used critical thinking and the scientific approach to integrate information from biological, social and behavioral sciences to make these advancements. Each class tells the backstory behind a selected historical breakthrough in public health philosophy, science and methods that improved population health.

It is not generally well recognized that these terms, and the methods used to describe their course, can be applied to slow-moving noncommunicable diseases, such as obesity, heart disease and cancer, as well as outbreaks of drug abuse, violence, or mass hysteria, in addition to acute infectious diseases such as COVID-19. The course will examine the dynamics of these outbreaks. Why do they start, what makes them take off, and why do they decline? In addition, the concept of the "syndemic", or the confluence and synergism in time and space of two or more outbreaks, will be examined.

SCHG 333. Globalizing Inequalities - WR 3 Units

Prerequisite(s): ANTH 201, or SOC 201, or SOC 202, or faculty consent.

Description: One popular story about globalization holds that human beings have been like boats all rising together on a globalizing tide. The course uses data and perspectives from across the social sciences to develop a more realistic story—one that understands that people are not boats and the tides can alternately lift them up or beat them down, refresh them or drown them depending on the circumstances. Questions about those circumstances structure the course. Another question addressed by the course: how can knowing more about globalization and in/equality help us develop the human career in different possible directions? The readings and other materials vary greatly by period, by spatical focus, and by analytical perspective. This is a WR course because the topic demands that students learn to pose their own questions about it and to answer those questions in cogent prose.

Note: Cross-listed ANTH 333.

Term Typically Offered: Fall, Spring, Summer
Description: This course focuses on the major threats to social cohesion and order in society and how such social problems affect human behavior. Generally, when individuals have problems, they contextualize them in highly personal terms; their perspective is guided primarily by their immediate situation and personal circumstances. However, there are socially structured contexts out of which individuals emerge and in which social problems are created, sustained, and/or changed - and, thus, impact human behavior. The purpose of the course, then, is to expand the student's understanding of current social problems related to inequality, social institutions, and modernization using the "sociological imagination," which distinguishes between personal and social problems and assumes the latter to be shaped by social forces/factors beyond an individual's control.

Description: This course will examine the various ways the legal system impacts and regulates mothers. Students will critically analyze the effect court decisions and laws have on mothers using an intersectional approach (as developed by Kimberle Crenshaw). The course begins with setting a theoretical framework - built on both theories of motherhood and legal analysis - and from there will study the interplay between the law and motherhood, from reproductive rights through raising children. This course is designed to give students an understanding of how the justice system impacts mothers' lives, maintains systems of inequality, and regulates their bodies.

Seeing Gender: Introduction to Gender in Visual Studies - AH, D1** **3 Units****Term Typically Offered:** Fall, Spring**Description:** This course introduces students to the disciplines of Visual Studies and Women's, Gender and Sexuality Studies. It explores the many ways in which these fields intersect through a consideration of two primary, related concepts: the social construction of vision and its inverse, the visual construction of the social. The first highlights how humans are conditioned to see the way they do because they are social animals. The latter underscores the fact that it is equally true that social arrangements, such as gender and race, take the forms that they do because humans are seeing animals. This framework allows students to critically engage some of the central questions that have shaped both Visual Studies and Women's, Gender and Sexuality Studies. How does seeing impose itself upon the social construction of gender and other forms of identity, such as racial and sexual identity? What is the relationship between images and words, and how does that relationship affect the politics of how images are used? What are the mechanisms by which vision and visual images become gendered or racialized? Why is visual experience so fraught with anxiety and fantasy? How do visual encounters with other people (and with images and objects) inform the construction of social life as gendered and racialized?For class offerings for a specific term, refer to the Schedule of Classes (<http://htmlaccess.louisville.edu/classSchedule/setupSearchClassSchedule.cfm>)**WGST 203. WGST 508. Queer Performance 3 Units

Term Typically Offered: Occasionally Offered

Description: What constitutes queer performance? Is queer who you are or what you do? Is sexuality all we mean by queer? What are the historical, aesthetic, and political aspects of queer performance? Integral to our theoretical discussions will be questions of practice and production: Where is queer performance staged and how is it received? How is it produced, for whom, by whom, and with what funds? Is queer inherently or even necessarily radical? Within rigid Western notions of gender, the "Queer Performer," is a gender outlaw; an individual who pushed at the edges of gender, forcing us to recognize that gender has little to do with our biological sex. Their performances of their gender(s), race(s), and/or sexuality(ies) challenges our prevailing notions of what it means to be Queer and what it means to perform identity. This course will examine the artistic and aesthetic performances of various Queer Performers to foster an understanding and appreciation of the rich diversity of the forms of performance styles and practitioners that might be called "lesbian," "gay," "transgender," and "queer," among others. Secondly, it will motivate students to examine the broad social, political, religious, and cultural contexts in which queer performance takes place. Lastly, this course will allow students to contemplate what it means to be a spectator of performance through a queer perspective, regardless of one's identity, or sexual orientation.

- WGST 525. Art and Trauma** 3 Units
Prerequisite(s): ARTH 270 and ARTH 325, or permission of instructor.
Description: Representations of Trauma in the Visual Arts is an advanced exploratory seminar examining the changing relationships between trauma and its representation in the twentieth century. Beginning with the Holocaust, the course charts a trajectory from this most profound of collective traumas, to the refinement of clinical definitions of trauma (e.g., PTSD) in the wake of the Vietnam War, the development of trauma studies in the humanities in the 1990s, to the recent "pictorial turn" within scholarship on trauma. This historical framework will be brought to bear upon the dynamics of how trauma and visibility have been approached by scientists, scholars, and artists. Each week's reading and viewing materials will offer students an example of historical or clinical account of trauma, a secondary or applied analysis, and its artist's original work that responds to the particular traumatic event under consideration. In this regard, students will be encouraged to negotiate the discursive relationships between history, theory, and practice.
